

# Intel vPro® Platform Capabilities are Key to Being Ahead of the Game for Symmetry Dimensions

Symmetry Dimensions Inc. is a startup developing a unique digital twin platform called SYMMETRY. The company handles large volumes of highly accurate, processing-intensive data, so it was essential to have a platform that can handle large volumes of high-load data and make remote access as secure as possible. ASUS ExpertBook B9 laptops powered by the Intel® Core™ vPro® processor family, can handle SYMMETRY's heavy data with its high-speed mobile performance, while Intel® Active Management Technology and Intel® Endpoint Management Assistant help facilitate remote management and support. With Intel® Hardware Shield on Intel vPro®, delivering one of the highest levels of hardware, software, and data protection right out of the box, it plays a major role in giving Symmetry peace of mind.

"The fact that it has powerful hardware-based security features that protect against attacks on the firmware and BIOS gives us great peace of mind."

**Shogo Numakura, CEO,  
Symmetry Dimensions**
